# 01

# 背景

传统 Research 方式面临的问题

### LLM 在复杂场景挑战

找出 xx 项目所有对外暴露的接口及其详情,包括包括 请求参数、响应参数、功能描述、核心逻辑实现

文件目录 代码规模20w行, 944 files

#### biz/app/application.go:118 func (a Application) RegisterHandlers() { value := reflect.ValueOf(a) for i := 0; i < value.NumField(); i++ {</pre> field := value.Field(i) if field.Type().Implements(reflect.TypeOf((\*RouteRegister)(nil)).Elem()) { httnHandler := field\_Interface()\_(RouteRegister) httpHandler.Register(a.ApiRouteGroup) biz/handler/acl.go:60 func (h \*ACLHandler) Register(r \*route.RouterGroup) { groupHandler := r.Group("acl") groupHandler.GET("strong\_auth/can\_use", h.CanUseStrongAuth) groupHandler.GET("strong auth/status", h.GetStrongAuthStatus)

# Deep Research 如何做 --- 原料

#### 关联性不强、搜索内容多

语义化搜索

#### 文字匹配

# Deep Research 问题 --- 流程

#### 没办法精确找到需要的代码片段范围

上下文过多

#### 无用信息过多

## Deep Research --- 示例

User: 找到项目中所有的 API

LLM:调用工具 search

Tool: grep "register" | gin" | http "| router" | path" | endpoint"

LLM: 读取文件 application.go

Tool: Read application.go 1-200 lines (total 2000 lines)

LLM: 该项目中所有对外暴露的 API 为 ...

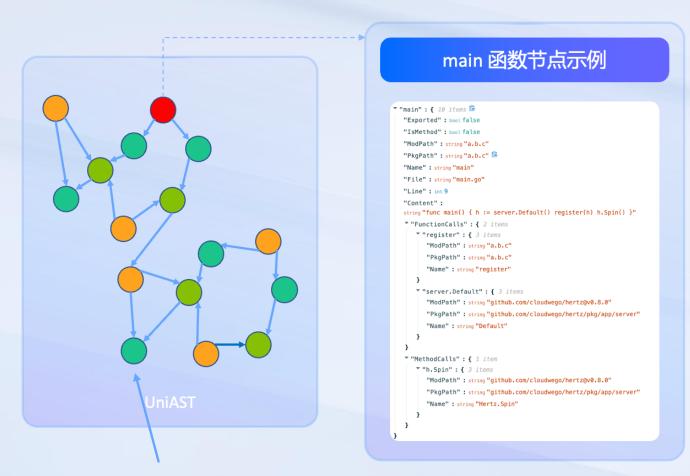

项目过大? 注册路由的地方过多? 同名的干扰太多?

# 02

# 解法

Deep Code Research 如何解决

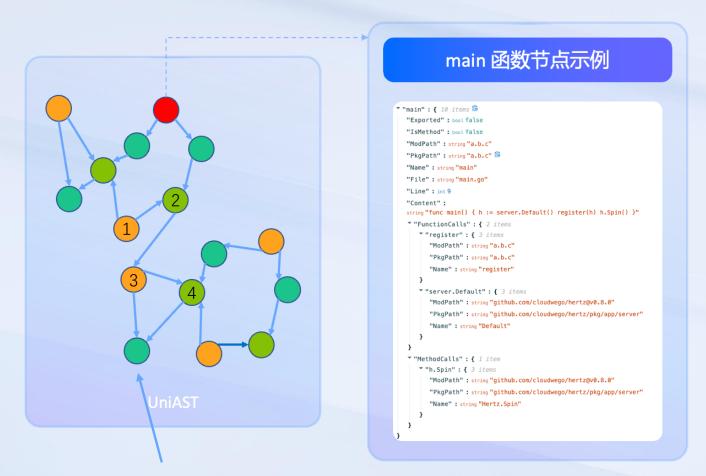

### 原料解法 --- ABCoder

nodes id: {repo\_name} ? {package\_name} # {func / variable / struct.method }

### 原料解法 --- ABCoder

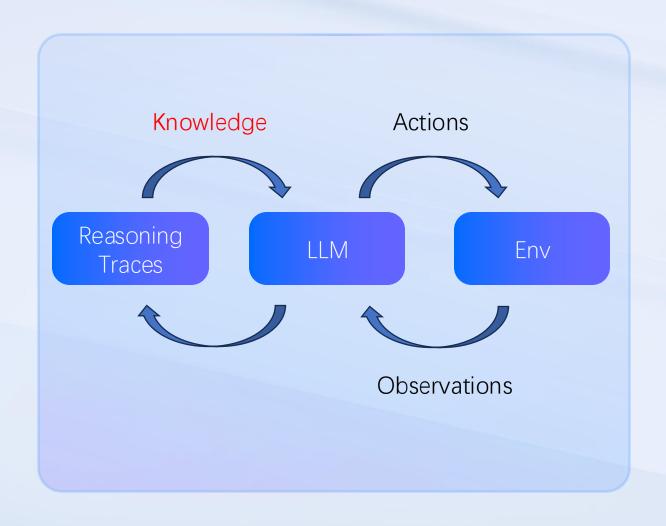

nodes id: {repo\_name} ? {package\_name} # {func / variable / struct.method }

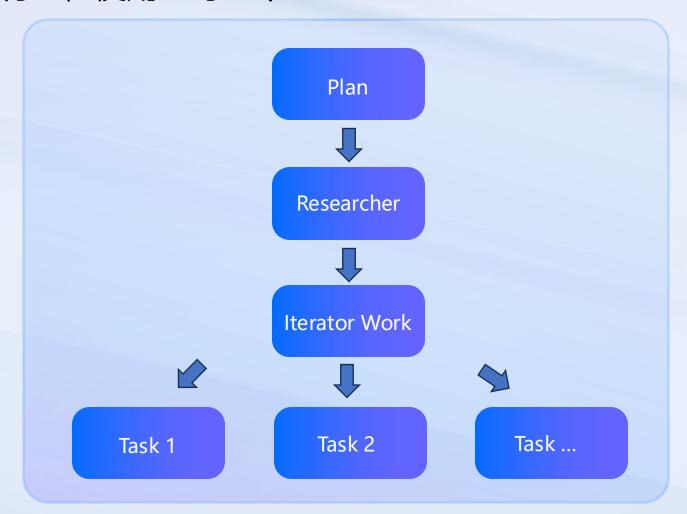

# 流程解法 --- Deep Code Research

### 只保留有用的内容

# 流程解法 --- Deep Code Research

避免"所有",使用"每一个"

## Deep Code Research --- 示例

#### Deep Research

User: 找到项目中所有的 API

LLM:调用工具 search

Tool: grep "router" |" http "|" router" |" path"

LLM: 读取文件 router.go

Tool: Read router.go 1-200 (total 2000 lines)

LLM: 该项目中所有对外暴露的 API 为 ...

#### ABCoder + Deep Code Research

User: 找到项目中所有的 API

LLM:调用工具 get\_nodes\_detail 获取 main 函数信息

Tool: get nodes detail, 'reponame?packagename#main'

Tool Res: {nodes:xxx, codes: xxx, reference: xxx, dependencies:xxx,}

LLM: 我已经获取了 main 函数的信息,下一步需要检查 Register 函数

Tool: get\_nodes\_detail, `reponame?packagename#Register`

LLM: 该项目中所有对外暴露的 API 为 ...

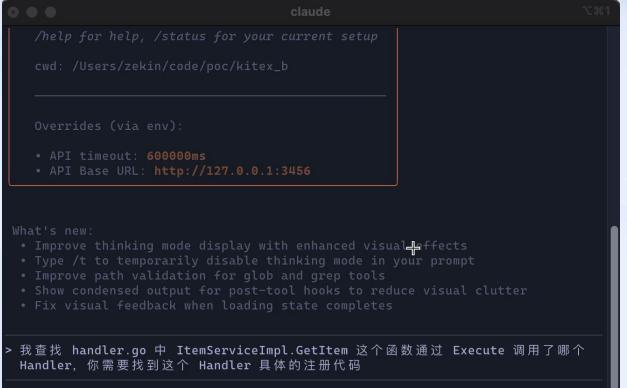

# 03 Demo演示

#### 查找工厂类实现

```
rr, err := registry.Execute(ctx, "rpc", "app", req)
func Execute(ctx context.Context, callType, key string, req interface{}) (interface{}, error) {
    if callType == "http" {
        return httpRegistry.Execute(ctx, key, req)
   } else {
        return rpcRegistry.Execute(ctx, key, req)
}
func (r *Registry) Execute(ctx context.Context, key string, req interface{}) (interface{}, error) {
   handler, err := r.Get(key)
    if err != nil {
        return nil, err
    return handler.Handle(ctx, req)
```

#### 查找工厂类实现

同样使用 doubao-seed-1.6

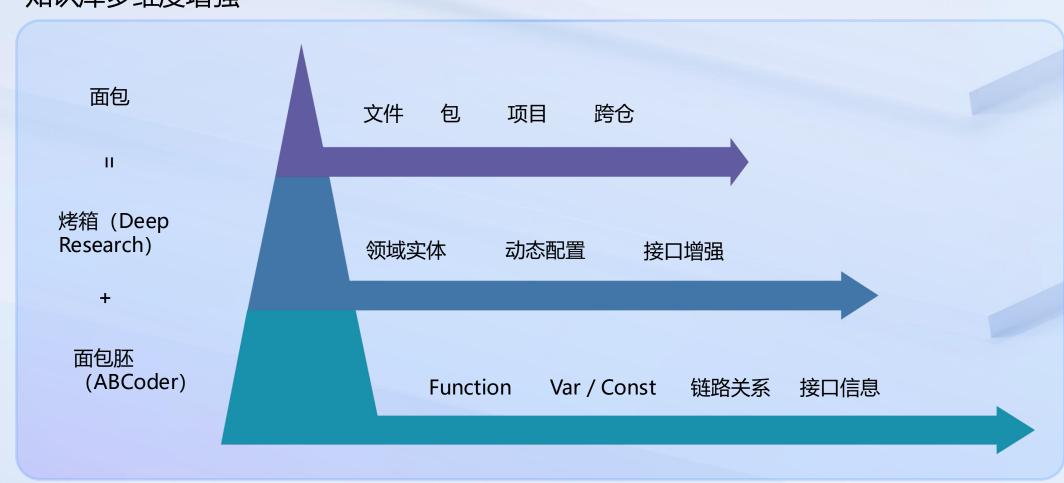

\* Handler 查找 Warn 2025-09-16 16:27:14,754 v1(7) util.go:108 10.3.191.55 - - default - 0 [KITE X] config file conf/kitex\_remote\_config.json is not writable, will try next cand idate: err=<Error: open conf/kitex\_remote\_config.json: no such file or directory Info 2025-09-16 16:27:14,764 v1(7) manager\_wrapper.go:224 10.3.191.55 - - defaul t - 0 [KITEX] load config and notify succeeded: service=-/default/0@BYTED-CP-1-c aller Info 2025-09-16 16:27:14,784 v1(7) manager\_wrapper.go:224 10.3.191.55 - - defaul t - 0 [KITEX] load config and notify succeeded: service=overpass.repo.info//1@BY TED-CP-1-callee Warn 2025-09-16 16:27:14,787 v1(7) client.go:170 10.3.191.55 - - default - 0 \_en v=prod \_env\_type=- [TCC] ZTI Token Get Error, error = the token is empty Warn 2025-09-16 16:27:14,813 v1(7) client.go:170 10.3.191.55 - - default - 0 \_en v=prod \_env\_type=- [TCC] ZTI Token Get Error, error = time token is empty Debug 2025-09-16 16:27:14,844 v1(7) mysql.go:177 10.3.191.55 - - default - 0 con nected database with primary dsn :@sd(toutiao.mysql.hkong\_write)/hkong?charset=u tf8mb4&interpolateParams=true&loc=Local&parseTime=True&readTimeout=5s&timeout=5s &use\_gdpr\_auth=true&writeTimeout=5s Info 2025-09-16 16:27:14,852 v1(7) mysql.go:36 10.3.191.55 - - default - 0 \_env= prod \_env\_type=- init mysql for toutiao.mysql.hkong success 帮我查找 code.byted.org/middleware/kitex\_b@b4f8ffe?code.byted.org/middleware/kit ex\_b#ItemServiceImpl.GetItem 这个函数通过 Execute 调用了哪个 Handler, 你需要找到 这个 Handler 具体的注册代码 <end>[Stats] 2025-09-16 16:27:34.765 failed to collect cgroup info: stats is nil 04

# 落地与展望

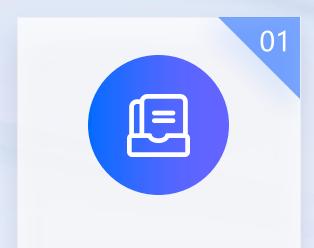

当 ABCoder 遇上 Deep Research

# 落地

#### 知识库多维度增强

# 落地

火焰图分析

根据火焰图和源代码,找到可以 优化的点

# 展望

# 从 AI Coding 到 AI Development 之路

# Q&A
